#### MSP meeting in London focuses on responsible investment in critical minerals

LME week brought the 14 partners of the Minerals Security Partnership (MSP) together for a principals' meeting in London at which they <u>announced</u> support for a range of projects. The meeting, which focused on responsible investment in critical minerals, included participants from Brazil, Indonesia, Kazakhstan, Mongolia and Zambia, as well as finance sector representatives. The partners are currently working on one project focusing on lithium; three on graphite; two on nickel; one on cobalt; one on manganese; two on copper; and seven on rare earth elements. A number of milestones were highlighted, including the <u>Chvaletice</u> <u>Manganese Project</u> in the Czech Republic that will recycle manganese from mine tailings. The project will produce high-purity electrolytic manganese metal needed for the battery supply chain.

The 3.6GW Dogger Bank Wind Farm, a JV partnership between SSE Renewables (40%), Equinor (40%) and Vårgrønn (20%), is being constructed in three 1.2GW phases known as Dogger Bank A, B and C. The project's first turbine at Dogger Bank A has <u>started</u> producing electricity. Power from the first offshore wind turbine is being transmitted to the UK's national grid via Dogger Bank's high-voltage direct current (HVDC) transmission system (more on <u>HVDC</u>). The wind farm is installing GE Vernova's <u>Haliade-X 13MW turbines</u>, their first deployment offshore. When fully complete and operational in 2026, Dogger Bank's 277 turbines will be capable of producing clean energy to power the equivalent of six million homes annually.

Anglo American <u>announced</u> the signing of a MoU with Mitsubishi Materials Corporation to collaborate on the creation of a copper product offering that meets customer demand for metals with provenance credentials. The collaboration will focus on driving traceability across copper's value chain, with the aim of identifying and measuring sustainability indicators that industry stakeholders and end customers deem most relevant and valuable. Anglo American and Mitsubishi Materials are also exploring decarbonisation opportunities to reduce the carbon footprint of metal provided to customers.

#### **Risk Factors**

Investment in the ETC Securities will involve a significant degree of risk. Investors may lose the value of their entire investment or part of it. Each prospective purchaser of, or investor in, ETC Securities should be familiar with instruments having characteristics similar to the ETC Securities and should fully understand the terms of the ETC Securities and the nature and extent of its exposure to risk of loss.

Performance and capital loss: Past performance is not a reliable indicator of future results. The value of an investment may go down as well as up and can result in losses, up to and including a total loss of the amount initially invested.

Generic risks: Investments in ETCs involve numerous risks including, but not limited to, metal market risks, foreign exchange risks, interest rate risks, and liquidity risks.
