

## Anglo American's production report highlights challenges facing copper producers in Chile

Anglo American released its production report for Q4 2023. For the full year, copper production increased by $24 \%$ to 826 kt , although fourth quarter production at 230 kt was down $6 \%$ on Q4 2022. The fall was due to a 16\% decline in production in Chile, largely caused by lower grade and harder ore at Los Bronces. 2024 guidance is for production of 730-790kt, split approximately 60/40 between Chile and Peru. Production in Chile is subject to water availability, while production in Peru will be weighted to the second half of the year. 2024 unit costs in Perv are projected to be ca. 110 cents/lb, considerably lower than the ca. 190 cents/lb figure for Chile. For nickel production from its two mines in Brazil, 2024 guidance is 36,000-38,000 tonnes.
LG Chem announced that is has signed a long-term cathode material supply contract with General Motors (GM), worth KRW 25 trillion ( $\$ 18.6$ billion). It builds on the 2022 binding agreement between the two companies for the supply of NCMA (nickel, cobalt, manganese and aluminium) cathode materials. Over a ten year period, from 2026 through 2035, LG Chem will supply GM more than 500,000 tons of cathode materials. The materials will be produced at LG Chem's plant in Tennessee. Separately, as GM looks to build up its capacity in battery technology and manufacturing, it announced that it has hired Kurt Kelty, whose previous experience includes leading Tesla's battery development team, to be vice president of Batteries.
ASX-listed Syrah Resources announced the start of active anode material (AAM) production at its 11.25 ktpa Vidalia facility in Louisiana. Vidalia is the first vertically integrated natural graphite AAM supplier outside China, processing natural graphite from Syrah's Balama Graphite Operation in Mozambique. Syrah has an offtake agreement with Tesla to supply 8 kpta AAM, subject to production ramp-up and qualification. Syrah is planning to hit $80 \%$ of its 11.25 kpta capacity within six months and full capacity within 18 months. It is looking at further expansion AAM production capacity at Vidalia to 45 ktpa and has applied to the US Department of Energy for a $\$ 350$ million loan.

## Risk Factors

Investment in the ETC Securities will involve a significant degree of risk. Investors may lose the value of their entire investment or part of it. Each prospective purchaser of, or investor in, ETC Securities should be familiar with instruments having characteristics similar to the ETC Securities and should fully understand the terms of the ETC Securities and the nature and extent of its exposure to risk of loss.

Performance and capital loss: Past performance is not a reliable indicator of future results. The value of an investment may go down as well as up and can result in losses, up to and including a total loss of the amount initially invested.

Generic risks: Investments in ETCs involve numerous risks including, but not limited to, metal market risks, foreign exchange risks, interest rate risks, and liquidity risks.
