

## With producers on the ropes, Australia adds nickel on the Critical Minerals List

Australia placed nickel on the Critical Minerals List on Friday. The decision was taken after six operating nickel facilities either announced reduction in operations or have gone into care and maintenance since the last update of the list in December. Earlier in the week, BHP in its Half Year 2024 Exceptional Items Update indicated that it would take a non-cash impairment charge of approximately US $\$ 2.5$ billion (post tax) (approximately US $\$ 3.5$ billion pre-tax) against the carrying value of Western Australia Nickel and is considering placing Nickel West into care and maintenance. Nickel producers will now have access to financing under the A $\$ 4$ billion Critical Minerals Facility and critical minerals-related grant programmes.
In nickel-related developments in New Caledonia, Glencore decided to transition Koniambo Nickel SAS (KNS) into care and maintenance. Glencore, which will seek to identify a potential new industrial partner for KNS, indicated that KNS would still be loss-making even with the proposed support of the French government. Reuters reported that Citi analysts estimate that halting production would avoid a negative impact on Glencore's EBITDA of up to $\$ 400 \mathrm{~m}$. Separately, it was reported that the French government has agreed to provide a $€ 140$ million loan to Prony Resources to avert its collapse.
RWE announced that it has completed the construction of three new battery energy storage systems totaling 190 MW ( 361 MWh) in the US. The three new BESS, Bright Arrow (Texas), Big Star (Texas) and Mesquite 4 (Arizona), are all paired with solar PV electricity output. Its global installed capacity is now about 700 MW . It is targeting battery storage capacity of 6 GW worldwide by 2030.
EnerSys selected Greenville, South Carolina as the location for a lithium-ion cell gigafactory. It is planning a $\$ 500$ million investment, which would be backed with potential federal, state and local funding as well as Inflation Reduction Act tax benefits. The operation, with a production capacity of four gigawatt hours (GWh) per year, would manufacture lithium-ion cells for commercial, industrial and defence applications.

## Risk Factors

Investment in the ETC Securities will involve a significant degree of risk. Investors may lose the value of their entire investment or part of it. Each prospective purchaser of, or investor in, ETC Securities should be familiar with instruments having characteristics similar to the ETC Securities and should fully understand the terms of the ETC Securities and the nature and extent of its exposure to risk of loss.

Performance and capital loss: Past performance is not a reliable indicator of future results. The value of an investment may go down as well as up and can result in losses, up to and including a total loss of the amount initially invested.

Generic risks: Investments in ETCs involve numerous risks including, but not limited to, metal market risks, foreign exchange risks, interest rate risks, and liquidity risks.
