Quarterly production figures from Glencore and Ivanhoe Mines

Glencore's quarterly production report <u>saw</u> no changes to 2024 production guidance for copper, nickel and cobalt, whose respective figures are 950-1010 kt, 80-90 kt and 35-40 kt. In the case of copper, production increased by 19.7 kt compared to Q2 2024 to 242.6 kt, which was the result of progressive recovery at Antapaccay (Peru) following a geotechnical event in H1, higher feed grades at Collahuasi (Chile) and improved production levels in the DRC. Nickel production year to date has declined by 9% to 62.3 kt as the result of Koniambo in New Caledonia being placed into care and maintenance.

Ivanhoe Mines reported record production of 116.3 kt tonnes of copper in Q3 2024 at Kamoa-Kakula in the DRC (303.3 kt YTD). It has however revised annual production guidance to between 425–450 kt of copper compared to original guidance of between 440-490 kt. The revised guidance reflects production loss due to intermittent grid power, which the company is working to address with DRC's state-owned power company. It has budgeted up to \$200 million for work to increase transmission capacity and improve the reliability of the grid, which commenced in late Q1 2024 and is scheduled for completion by the end of 2025.

Reuters <u>reported</u> that Japan's Hokkaido Electric Power and Chugoku Electric Power, which have been unable to restart their nuclear reactors post Fukushima, have booked extraordinary profits for the April-September period from the sale of nuclear fuel. Hokkaido Electric <u>booked</u> a special profit of 19 billion yen (\$124 million) for the six months ended Sept. 30. An official indicated that they have been selling nuclear fuel since 2021, taking advantage of rising resource prices linked to the revival of interest in nuclear power.

Recurrent Energy, the developer, owner, and operator of solar and energy storage assets, <u>announced</u> that it has signed two new 20-year <u>tolling agreements</u> with Arizona Public Service Company (APS) for the Desert Bloom Storage and Papago Solar projects. Both projects, located in Maricopa County, Arizona, are scheduled to start construction in 2025 and be operational in 2026. Desert Bloom Storage is a 600 MWh storage facility and Papago Solar is a 150 MWac solar facility.

Risk Factors

Investment in the ETC Securities will involve a significant degree of risk. Investors may lose the value of their entire investment or part of it. Each prospective purchaser of, or investor in, ETC Securities should be familiar with instruments having characteristics similar to the ETC Securities and should fully understand the terms of the ETC Securities and the nature and extent of its exposure to risk of loss.

Performance and capital loss: Past performance is not a reliable indicator of future results. The value of an investment may go down as well as up and can result in losses, up to and including a total loss of the amount initially invested.

Generic risks: Investments in ETCs involve numerous risks including, but not limited to, metal market risks, foreign exchange risks, interest rate risks, and liquidity risks.
