27 January 2025

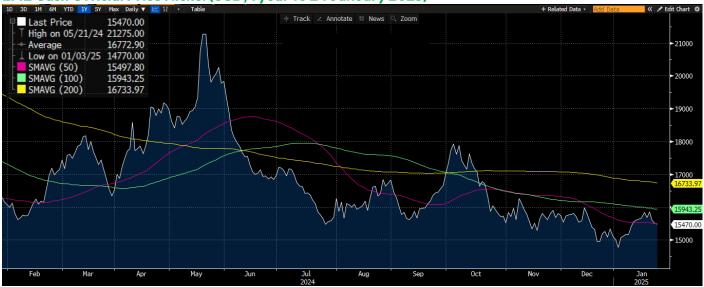

Results and guidance from Freeport-McMoRan and Teck

Freeport-McMoRan <u>reported</u> its fourth quarter and full year results. For the full year, Freeport's average realised price for copper was \$4.21 per pound with average unit net cash costs of \$1.56 per pound. Freeport-McMoRan expects 4bn lbs of copper sales in 2025 compared to 4.1bn lbs in 2024. The reduction is linked to the fire at the new smelter at Grasberg in October 2024. PT-FI, which operates Grasberg, has applied to the Indonesian government for permission to export copper concentrate until the smelter is repaired and fully operational. It is expecting to receive approval to export concentrate in 1Q 2025. Separately, PT-FI is also likely to apply this year for an extension to its mining rights beyond 2041. PT-FI <u>estimates</u> that it will produce 8.4 bn lbs of copper at Grasberg over the next five years.

Teck Resources, which is now focused on copper and zinc production, <u>reported</u> its full year results and provided production guidance to 2028. Total copper production in 2025 is expected to increase to between 490-565kt compared to 446kt in 2024, largely as a result of growth in production at <u>Quebrada Blanca</u> and <u>Highland Valley Copper</u>. It provided a comprehensive <u>overview</u> of its copper and zinc projects and the outlook for both metals. One of the takeaways from the copper analysis is that the 7Mt growth in mine production in the last 20 years needs to be repeated in the next 10 years to meet expected demand growth.

In nuclear news, the interest in the development of Small Modular Reactors (SMRs) was underlined by the MoU <u>signed</u> by EDF, Edison and ENEA (the Italian National Agency for New Technologies, Energy and Sustainable Economic Development), in which they undertake to collaborate on the industrial applications of SMRs. The collaboration will focus on the analysis of thermo-hydraulic systems and passive safety systems, new technologies, integral system operation and the opportunity to provide electricity and heat in cogeneration mode for industrial needs. Italy's commitment to nuclear power was also highlighted by the government's <u>indication</u> that it aims to finalise a plan to allow the use of nuclear power by the end of 2027.

Risk Factors

Investment in the ETC Securities will involve a significant degree of risk. Investors may lose the value of their entire investment or part of it. Each prospective purchaser of, or investor in, ETC Securities should be familiar with instruments having characteristics similar to the ETC Securities and should fully understand the terms of the ETC Securities and the nature and extent of its exposure to risk of loss.

Performance and capital loss: Past performance is not a reliable indicator of future results. The value of an investment may go down as well as up and can result in losses, up to and including a total loss of the amount initially invested.

Generic risks: Investments in ETCs involve numerous risks including, but not limited to, metal market risks, foreign exchange risks, interest rate risks, and liquidity risks.
