## Cameco and Brookfield announce nuclear power partnership with US Government

Cameco announced that it and Brookfield Asset Management have entered into a binding term sheet with the US Department of Commerce to establish a strategic partnership to accelerate the global deployment of Westinghouse nuclear reactor technologies and reinvigorate supply chains and the nuclear power industrial base. The agreement provides for the US to arrange financing and facilitate the permitting and approvals for new Westinghouse nuclear reactors to be built in the US, with an aggregate investment value of at least US\$80 billion. The US Government will be granted a participation interest, which, once vested, will entitle it to receive 20% of any cash distributions in excess of US\$17.5 billion made by Westinghouse. Additionally, in the event of a Westinghouse IPO, subject to certain conditions, the US Government will be entitled to purchase equity securities equivalent to 20% of the public value of the IPO entity.

The Board of Directors of Santee Cooper, South Carolina's public power and water utility, approved a letter of intent with Brookfield Asset Management about the potential completion of the two partially built Westinghouse AP1000 nuclear units in Fairfield. Construction of the reactors was abandoned in August 2017 following Westinghouse's bankruptcy filing. The letter of intent establishes a six-week initial project feasibility period during which the parties will select a project manager and evaluate construction providers. The six week period would also be used to pursue discussions with entities interested in buying power generated by the units and allow for additional due diligence.

Ivanhoe Mines released its 3Q 2025 figures, which include updates on dewatering activity at Kakula Mine in the DRC following the seismic activity in May. Stage Two dewatering of the mine is 35% complete and expected to be completed in early December. The company indicated that annualised copper production will return to over 550,000 tonnes over the medium term and Kamoa-Kakula's 500,000-tonne-per-annum onsite, direct-to-blister copper smelter should commence start-up in the coming weeks.
